## Summary

Senior Software Engineer with 11 years of professional software development experience, specializing in Go and designing high-load backend systems.

I have experience developing high-load services and distributed systems. I am involved in the full software development lifecycle, from analyzing business requirements and designing system architecture to implementation, deployment, and maintenance of services in production.

Core competencies:

Designing and developing backend services in Go.

Building distributed systems and implementing inter-service communication.

Database design, query optimization, and performance tuning.

Effort estimation, task decomposition, and planning technical changes.

Analyzing dependencies and assessing the impact of changes on existing system components.

Conducting code reviews with a focus on correctness, algorithmic complexity, and compliance with architectural requirements.

Experience in technical leadership of a backend development team.

When designing systems, I prioritize simple, well-justified architectural solutions that balance reliability, performance, and maintainability.

Tech stack:

Go, TypeScript, NodeJS, Tempo, Pyroscope, PostgreSQL, Redis, NATS, gRPC, Docker, Kubernetes, Prometheus, Grafana, Kafka, RabbitMQ, ClickHouse.

Additional experience:

I am developing Onepiece, a modular AI-powered tool for automating engineering workflows. I also work with Rust and TypeScript. I have over 10 years of experience reverse-engineering MMORPG network protocols

## Work Experience

## **1inch**

### Senior Backend Engineer

January 2023 – September 2026

- Initiated and designed the migration of inter-service communication from HTTP to NATS to simplify service orchestration and horizontal scaling across multiple AWS regions.
- Collaborated with the DevOps team to design a multi-region NATS topology with independent regional clusters interconnected through leaf nodes.
- Designed and implemented a Go library for inter-service communication using NATS request/reply and queue groups. Built worker-level backpressure mechanisms, request classification by computational complexity, and application-level ACK/NACK handling with client-side retries to redistribute requests under load.
- Developed and maintained DEX protocol integrations within Pathfinder, a trade routing service, expanding liquidity coverage and available swap routes to improve execution options.
- Adapted integrations to changes in external APIs and smart contracts, collaborating with DEX protocol teams to investigate and resolve compatibility issues.
- Investigated and resolved production incidents involving trade routing, blockchain interactions, and external protocol integrations. Developed integration tests covering real-world swap scenarios using Tenderly and blockchain RPC providers.
- Designed and maintained backend deployment workflows for staging and production environments.
- Participating in integration new blockchains like Solana, Robinhood.
- Technologies: Go, TypeScript, NATS, Redis, gRPC, Protobuf, ClickHouse, AWS, Blockchain, Tenderly, RPC.

## **Faraway**

### Senior Golang Developer

January 2022 – December 2022 · Remote · Full-time

- Developed Go backend services for real-time multiplayer features, including rooms and lobbies, taking features from product requirements and architecture through implementation and production support.
- Designed horizontally scalable microservices and distributed workloads across service instances.
- Developed WebSocket infrastructure and used message brokers for inter-instance event delivery.
- Designed ETL pipelines and data distribution across PostgreSQL, ClickHouse, and Redis according to access patterns, reducing load on the primary PostgreSQL database.
- Applied table partitioning, cross-node data sharding, and workload separation to write-intensive systems, selecting approaches according to the access pattern.
- Technologies: Go (Golang), PostgreSQL, ClickHouse, AWS, Redis.

## UserReplay

Senior Golang Developer

June 2020 – November 2021 · Remote · Full-time

- Developed Go backend services and integrated new features for a user behavior analytics platform.
- Refactored the event-driven backend to improve data-processing performance.
- Implemented Terraform pipelines for infrastructure changes and maintained the platform's AWS clusters.

## youwork.today

Technical Team Lead

December 2018 – May 2020 · Remote · Full-time

- Led a backend team developing and maintaining projects for external clients.
- Combined development coordination with hands-on backend implementation.
- Improved architecture and refactored existing backend systems.

## Mobalytics

Backend Developer

October 2017 – October 2018 · Remote

- Developed and maintained microservices for a gaming analytics platform.
- Worked on the CS:GO communication protocol and delivered a beta analytics solution for the game.
- Investigated technical issues and maintained backend service stability.

## Ronin Club

Software Engineer

March 2017 – October 2017 · Remote · Contract

- Developed applications for external clients, translating business requirements into application logic and integrating new functionality.

## SeeSaw Labs

Middle Golang Developer

July 2015 – January 2017 · Remote · Full-time

- Developed backend components in Go and implemented application business logic.

## Iron.io

Middle Golang Developer

September 2016 – December 2016 · Remote · Freelance

- Developed a Go CLI for interacting with the Iron service, implementing commands and improving command-line workflows.

## Skills

Languages: Go / Golang, Rust, Elixir, TypeScript, JavaScript, Dart, Zig

Backend & Systems: Backend Development, Distributed Systems, Event-Driven Architecture, Microservices, CLI Development

Cloud & Infrastructure: AWS, GCP, Kubernetes, Multi-cluster Kubernetes, Docker, Terraform

Delivery & Automation: CI/CD, GitHub Actions, Infrastructure as Code

Databases & Search: PostgreSQL, CockroachDB, MySQL, MongoDB, Elasticsearch

Messaging: NATS, NATS JetStream, Kafka, RabbitMQ

Observability: Prometheus, Grafana, Jaeger, Grafana Tempo, Grafana Loki

Reverse Engineering: IDA Pro, OllyDbg, Wireshark, Protocol Reverse Engineering

AI & Agent Engineering: Claude Code, Codex, OpenCode, Onepiece, Local Qwen Models, LLM Deployment, vLLM, SGLang, Model Quantization, Custom Harnesses

Engineering Practices: Backend Team Leadership, Agile Development, Scrum

API & Networking: REST, gRPC, WebSockets, HTTP, TCP/IP, Protobuf, Asynchronous RPC

Go Engineering: Concurrency, Profiling, pprof, Continuous Profiling, Benchmarking, Memory Optimization

Reliability: Incident Response, Root-Cause Analysis, SLO/SLI, On-call

Testing: Unit, Integration, End-to-End, Load Testing, Fuzzing

Security: OAuth 2.0, JWT, RBAC, Secrets Management

Blockchain Backend: EVM, JSON-RPC, ABI, Smart-Contract Integration, Transaction Lifecycle

Platform: Linux, Bash, Helm, Argo CD, GitOps

Caching: Redis, Cache Invalidation, Distributed Caching

## **LLM Serving & Custom Harnesses**

Knowledge of LLM deployment and serving with vLLM and SGLang.

Knowledge of model quantization in the context of LLM deployment.

Develop and use my own modular Onepiece harness for AI-assisted engineering workflows.

Enable optional capabilities and extensions independently in Onepiece as needed.

Hands-on experience with Claude Code, Codex and OpenCode.

Prefer local Qwen models for privacy.

Follow spec-driven workflows with a research-first approach.

Verify work through live testing and evidence-based checks. Re-check previously validated work in a fresh context, independently of earlier conclusions.

## **Certifications**

Professional Scrum Developer 1

## **Open Source & Interests**

I've open-sourced three game versions through more than a decade of reverse-engineering MMORPG protocols.

Interests include Zig and Gleam, low-level systems, functional programming and fault-tolerant backends.
